Announcements : Lower Tuolumne Accretion Measurement Data / August 10 Meeting Date Rescheduled for September 21 Morning

Title	Lower Tuolumne Accretion Measurement Data / August 10 Meeting Date Rescheduled for September 21 Morning
Body	<p><i>The date of the proposed additional Hydrology Workshop has been rescheduled for Friday, September 21 from 9:00 a.m. to 12:30 p.m. - Location to be announced shortly.</i></p> <p>Attached are the results of accretion measurements collected by the Districts at the locations--using the methods--proposed by the Districts on June 6, 2012. No comments from Relicensing Participants on these locations and methods were received, so the Districts implemented the measurements as described in the June 6 proposal (attached) during the last week of June.</p> <p>NEW DATE! This Workshop has been rescheduled for Friday, September 21 from 9:00 a.m. to 12:30 p.m. Location to be announced shortly! <i>The Districts would like to propose an additional Relicensing Participants Meeting to be held on August 10 from 10 a.m. to 12:30 p.m. to discuss several items. Please reply by Wednesday August 1, 2012 to Rose Staples (rose.staples@hdrinc.com) with your availability and interest in participating in the August 10 meeting, which will be held at MID offices in Modesto--and a conference line and weblink will be made available.</i></p> <p>In the attached accretion measurement plan, the Districts committed to providing this information by early-August. The Districts are providing the field results early in order to facilitate discussion of next steps sooner rather than later--and to allow for appropriate planning to meet any additional information needs.</p> <p>During study development, the National Marine Fisheries Service requested, and the Districts agreed to provide, additional statistical analyses related to flows, where it is available. The Districts would like to review precisely which data are available with participants--and to work with NMFS and other relicensing participants to confirm that the information requests are fully understood and analyses can be initiated in response to their requests.</p>

Announcements : W&AR-5 Workshop Draft Notes-Attachments for Review

Title	W&AR-5 Workshop Draft Notes-Attachments for Review
Body	<p>Attached are the DRAFT Meeting Notes from the Don Pedro W&AR-5 Salmonid Population Information Synthesis Workshop held on July 26, 2012. In addition to the draft notes, the Districts have provided, for participant feedback, critical items to the conduct of the study: (1) Life cycle diagrams edited based on meeting feedback (changes highlighted in attachments to the Notes). These conceptual models will form the basis of the models developed under W&AR-6 (Chinook Population Model) and W&AR-10 (O. mykiss Population Model). (2) During the workshop, the preliminary ranking of key issues affecting salmonid life stages that will be used in the development of the models was discussed. The Districts have provided, for review by the relicensing participants, preliminary rankings based on information reviewed to date (with citations) as attachments to the Notes. Remember, the key elements in the development of these ranking are that there are data available to support the importance of the item to the life stage and that the potential issue can be quantified for use in the population models.</p> <p>The Districts have reviewed and included available information to support the current identification of key issues, and the Districts will be moving forward with development of the models per study plans for W&AR-6 and W&AR-10 based upon the information presented at the Workshop and documented in the meeting notes and attachments. The Districts appreciate the feedback provided to date. As discussed at the workshop, if any further changes to the rankings are recommended by the participants, the Districts request source data and references to support recommendations within the 30-day review period for these Notes.</p> <p>Please provide any comments on the draft workshop notes and any additional source materials to Rose Staples (rose.staples@hdrinc.com) by no later than Friday, August 24, 2012.</p>
